## Windows Vista Users

Windows Vista introduced a new CD/DVD file system called Windows Live File System which allows for more flexibility in how you manage files on a CD or DVD. Unfortunately, this new format causes some compatibility issues when trying to share a CD or DVD created in Windows Vista with a computer using a different operating system.

**To maximize the compatibility of your burned CDs and DVDs, follow these steps:**

1. Insert a disc into your computer's CD or DVD drive.
2. In the dialog box that appears, click **Burn files to disc**.
3. In the **Burn a disc** dialog box, type a name for your new disc.
4. Click **Show formatting options**, and then click **Mastered**.
5. Click **Next** to prepare the disc.
6. Now you can copy files to your disc and have them be readable by other operating systems.
